

The GECKO Project

Gene Expression Collaborative for Kids Only

Do you have a child in Grade 3?

Have you ever wondered how your experiences impact your health and well-being?

The GECKO research team is conducting a fun study to learn about how children from various neighbourhoods can perform better in school.

In our study, kids complete a few challenges while we record their physiological responses.

Our study is designed to be convenient and accessible to families by bringing our mobile lab to your home!

There is no cost to participate in our study.

Families will receive a \$25 reimbursement for their time.

If you and your **3rd Grader** are interested in taking part, please contact Stephanie at **604.827.3426** or **gecko.project@ubc.ca**

www.earlylearning.ubc.ca/gecko

We will be running our study all year long!
